Creating a Detail View for Collections

Thomas Claudius Huber

MICROSOFT MVP (WINDOWS DEVELOPMENT)

@thomasclaudiush   www.thomasclaudiushuber.com

Module Outline

Create the ProgrammingLanguageDetailView

- Single view that is used to edit all programming languages

Implement

- Repository

- ViewModel

- View with DataGrid

Demo

Integrate the detail view for ProgrammingLanguage entities

- Create a DetailViewModel for programming languages
- Create a view
- Add a new command to the MainViewModel to open the view

Demo

Set up the ProgrammingLanguageRepository

Implement the ProgrammingLanguageDetailViewModel

Set up the View with a DataGrid

Demo

Refresh the programming languages in open friend tabs

Demo

Add and remove programming languages

Demo

Catch Exceptions when saving

Check if a programming language is referenced

Summary

Integrate a detail view for collections

Check if entities are referenced
